DOMINO

SUBITIZING, TAL og ANTAL 1-10

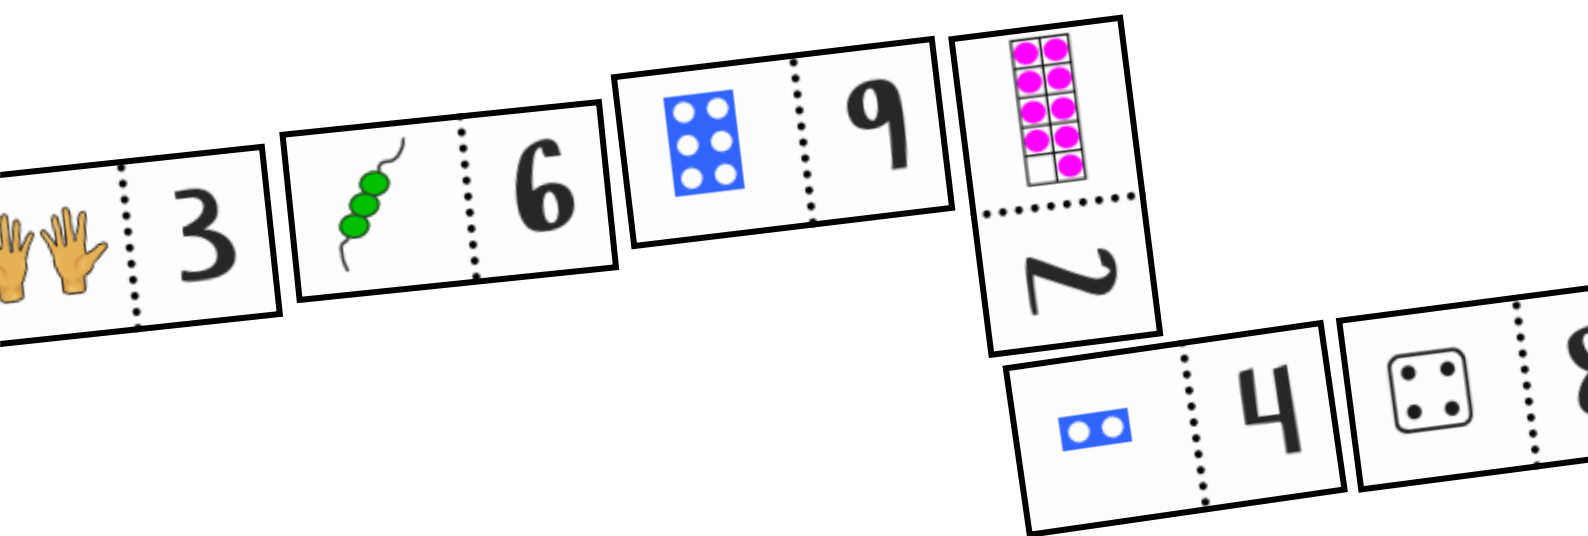

DOMINO: Subitizing, tal og antal

Disse domino-spil kan både laves individuelt eller i par. Hvis to elever spiller sammen og skiftes til at fortælle hinanden hvilken brik, de nu skal finde, så får man samtidig trænet tallenes navne ligesom det medfører rigtige gode snakke om tal og antal undervejs.

Spillene kan også meget vel indgå som en værkstedsaktivitet.

Sådan gør du:

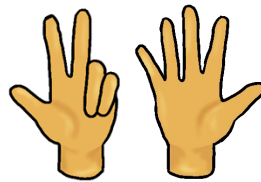

- Print dominobrikkerne og klip dem ud. Hvert kopiark er et spil for sig.
- Læg alle brikkerne op ved siden af hinanden, så man kan se dem alle på en gang.
- Start med en tilfældig brik. Find nu enten det tal, som passer til billedet eller modsat det billede som passer til brikkens tal. Sådan fortsættes med at forbinde brikkerne en efter en. Hvis den løse ende på sidste brik passer sammen med den løse ende på første brik, så er spillet formodentlig lagt korrekt.
