

Slå tallene over i mindre dele

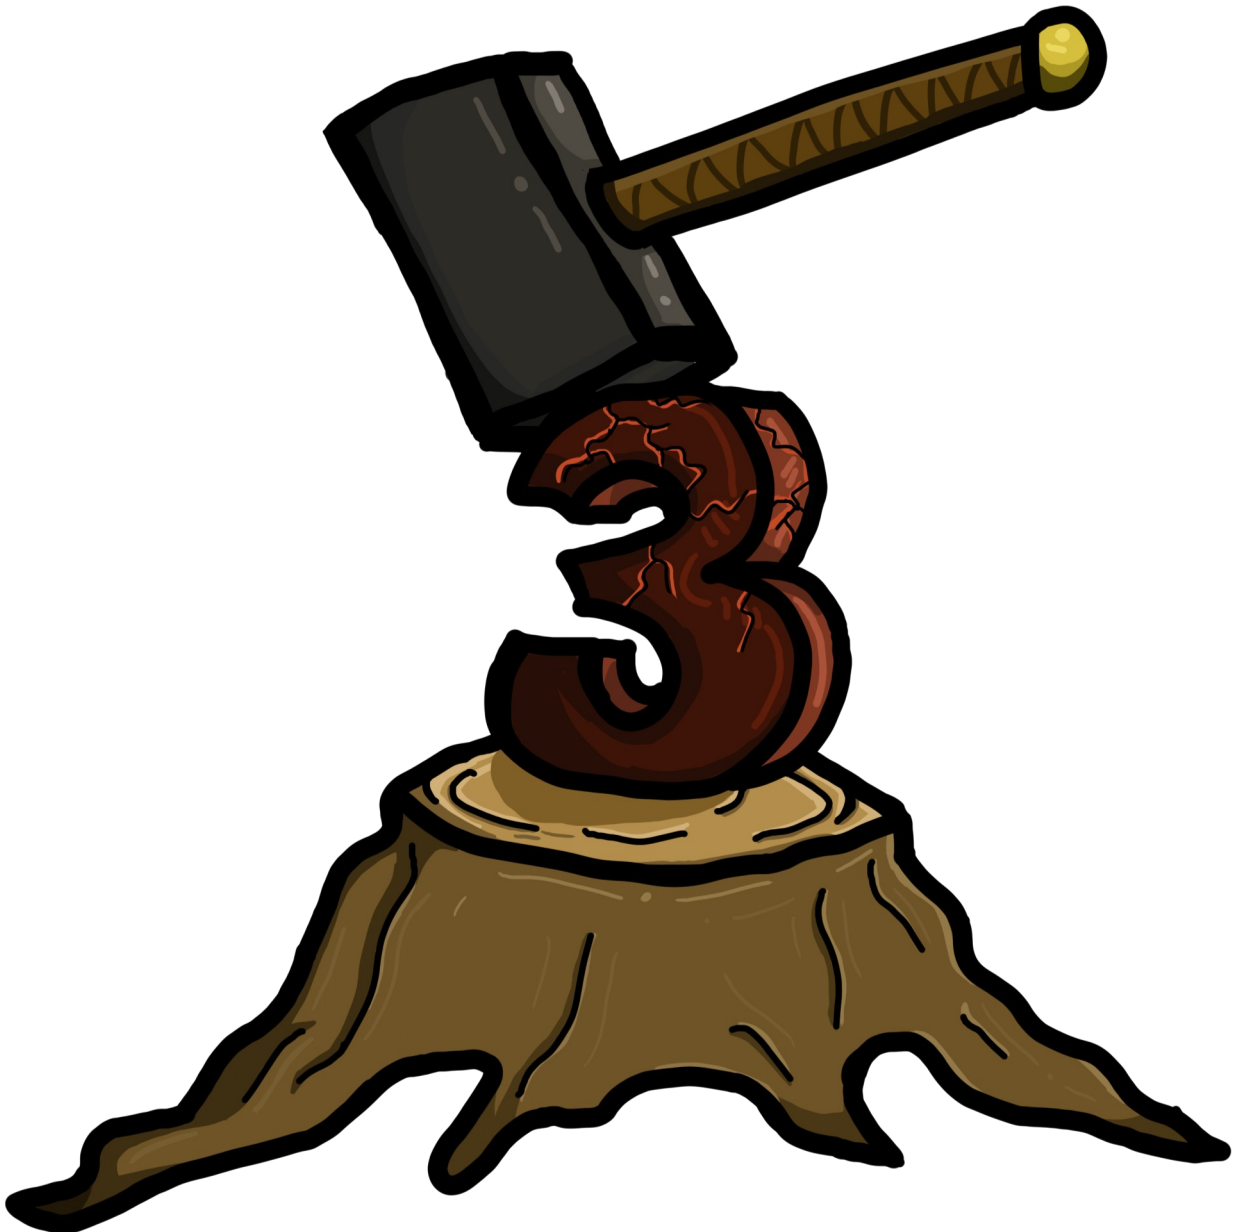

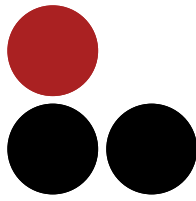

Det er vigtigt til alt arbejdet med regnestrategier, at eleverne lærer, hvordan de små tal kan opdeles i andre tal, hvilket derfor skal have særligt fokus i de første skoleår.

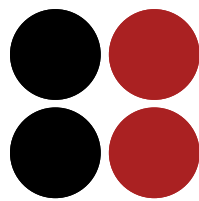

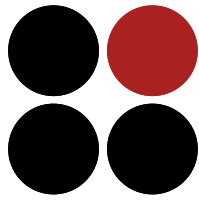

Disse plakater er et forsøg på at understøtte de elever, som ikke er blevet helt sikre i opdeling af tallene fra starten af og fortsat har brug for noget visuelt at støtte sig til i klassen.

Plakaterne indeholder kun opdeling af tallene 2-10 i to tal. Der findes jo også mange andre opdelinger. Dem kan eleverne selv arbejde med at undersøge i de tilhørende opgave ark, som findes i en fil for sig.
